

GUNOLD®

Self-adhesive paper FILMOPLAST STIC Gunold®

FILMOPLAST STIC Gunold – it is self-adhesive paper for stabilization the base material.

Composition: two-layered material:

1-st layer- non woven fabric coated with acrylic adhesive

2-nd layer- silicone paper

Supplied in rolls: the length is 25m/ the width is 84cm, 54cm or 27cm.

Colour scale: white and black variants.

Density of the material: 120 gr/m or 140gr/m

It is intended for stabilization:

- complicated materials (knitted, leather, cashmere) which can't be fixed in tambour
- small details of cut, which can't be placed in tambour

Recommendations:

FILMOPLAST is very economical material in use since protective paper is necessary to remove only in that place where the embroidery will be done. FILMOPLAST is fixed only in tambour, at that time the basic material glue on it, doesn't move and doesn't deform. Staying under the embroidery FILMOPLAST does not tighten it after taking out of the tambour.
