

# GUNOLD®

## FILM SOLVY Gunold®

SOLVY Gunold – water-soluble film is intended for embroidery of complicated motives on knitted and terry products, on knitted and fleecy materials. SOLVY helps not to be lost small details of embroidery in fabric.

**Composition:** special water-soluble material  
100% polyvinyl alcohol (PVA)

**It is delivered in rolls:** the length is 100m/ the width is 100cm or 33cm

**Density of material:**

SOLVY - 10 micron

SOLVY FILM - 20 micron

SOLVY – it's the most thin film with punching, it's possible to use for embroideries with very small stitches.

SOLVY FILM – it's the inexpensive film without punching. It's better to use for embroideries with the large drawing.

**Recommendations:**

SOLVY и SOLVY FILM are fixed on a working surface of fabric. After the embroidery termination, the film which is falling outside the limits motive of embroidery, easily comes off a hand, the film rests on the motive easily leave by means of steam or a damp sponge. The film is dissolved at to water temperature 10 0C to 40 0C, dissolution time: from 8 till 73 seconds. The higher the water temperature is, the faster the film dissolves.
