

# GUNOLD®

## Film THERMOFILM Gunold®

Thermoplastic film Gunold Thermofilm for machine embroidery.

It is used primarily as a stabilizer at the top embroidery on diapers fabrics (knits, velvet, terry cloth). Easily removed with the iron leaving no trace on the fabric.

**Composition:** thermoplastic film based on a copolymer of polyethylene (PE)

**Supplied in rolls:** 100 cm x 200 m / 50 cm x 25 m

**Density of material:** 30 micron

### Application:

- Embroidery without stabilizing material
- Shirting fabric and vesting
- Knitted fabric
- Silk
- Denim
- Velvet fabric

### Recommendations:

- For stabilization of the embroidery: THERMOFILM fixed on the working surface of the fabric.
- At the end of the film, tear off any excess.
- THERMOFILM remove iron (iron temperature is set depending on the requirements of the underlying tissue), the processing time is about 15 seconds (**never use steam or press!**)
- Of the influence of temperature THERMOFILM turns into a yellow-brown powder which is easily peeled off with a brush.
